SUBJECT INDEX

Adverse weather, measurements of infrared and visible extinction in, 99
Aerosol clouds of nonspherical particles at arbitrary wavelengths, extinction by, 24
Aerosol composition in the marine and coastal boundary layer, 154
Aerosol on fog microstructure, the effect of the, 162
Aerosol model for the marine environment, modified gamma, 186
Aerosol modeling in the marine boundary layer, 150
Aerosol modeling on performance calculations of electro-optic systems operating in marine environments, impact of, 200
Aerosols growing into fogs, optical properties of model, 143
Aerosols over oceans, satellite measurements of, 197
Airborne platforms, transmission effects of explosion-produced dust clouds on downward viewing, 53
Analysis of current electro-optical modeling and field testing in the smoked environment, 17
Army Smoke Research Program, future optical and electro-optical instrumentation requirements of the, 2
Assessment of operational techniques for estimating visible spectrum contrast transmittance, 119
Atmospheres, contrast transmittance models for cloudy, 133
Atmospheric boundary layer, meteorological models for optical properties in the marine, 170
Atmospheric effects, the change of limiting resolution of electro-optical systems due to, 268
Atmospheric and man-made obscurants on visual contrast, effects of, 37
Atmospheric Sciences Laboratory-MMTRN model and data review, near millimeter wave snow extinction:, 238

Ballistic Research Laboratory, millimeter-wave propagation measurements at the, 224
Beam spread and wander at 1.06, 3.8, and 10.6 μm, experimental measurements of turbulence induced, 273
Boundary layer, aerosol composition in the marine and coastal, 154
Boundary layer, aerosol modeling in the marine, 150
Boundary layer, meteorological models for optical properties in the marine atmospheric, 170

Change of limiting resolution of electro-optical systems due to atmospheric effects, the, 268
Characteristics of near-millimeter wave propagation in snow, 261
Cirrus cloud optical properties and effects on infrared sensors, review of, 70
Cloud optical properties and effects on infrared sensors, review of cirrus, 70
Clouds on downward viewing airborne platforms, transmission effects of explosion-produced dust, 53
Clouds of nonspherical particles at arbitrary wavelengths, extinction by aerosol, 24
Cloudy atmospheres, contrast transmittance models for, 133
Coastal boundary layer, aerosol composition in the marine and, 154
Comparison of methods used to determine the mass extinction coefficient of phosphorus smokes, 7
Contrast, effects of atmospheric and man-made obscurants on visual, 37
Contrast transmittance, assessment of operational techniques for estimating visible spectrum, 119
Contrast transmittance models for cloudy atmospheres, 133

Dust clouds on downward viewing airborne platforms, transmission effects of explosion-produced, 53
Dust, optical characteristics of windblown, 45
Dynamics of fire plumes, sequential process method of modeling thermo-gradients and the, 31

Effect of the aerosol on fog microstructure, the, 162
Effects of atmospheric and man-made obscurants on visual contrast, 37
Electric-optical sensor performance, weather and thermal, 79
Electro-optic systems operating in marine environments, impact of aerosol modeling on performance calculations of, 200
Electro-optical instrumentation requirements of the Army Smoke Research Program, future optical and, 2
Electro-optical modeling and field testing in the smoked environment, analysis of current, 17
Electro-optical systems due to atmospheric effects, the change of limiting resolution of, 268
Estimating visible spectrum contrast transmittance, assessment of operational techniques for, 119
Experimental measurements of turbulence induced beam spread and wander at 1.06, 3.8, and 10.6 μm, 273
Explosion-produced dust clouds on downward viewing airborne platforms, transmission effects of, 53
Extinction in adverse weather, measurements of infrared and visible, 99
Extinction by aerosol clouds of nonspherical particles at arbitrary wavelengths, 24
Extinction: Atmospheric Sciences Laboratory-MMTRN model and data review, near-millimeter wave snow, 238
Extinction coefficient for phosphorus smokes, comparison of methods used to determine the mass, 7

Field testing in the smoked environment, analysis of current electro-optical modeling and, 17
Fire plumes, sequential process method of modeling thermo-gradients and the dynamics of, 31
Fires, visible, infrared, and microwave propagation in and near large, 28
Fog and haze in West Germany: a preliminary report on project "Meppen 80," measurements of the properties of wintertime, 126
Fog microstructure, the effect of the aerosol on, 162
Fogs, optical properties of model aerosols growing into, 143
Future optical and electro-optical instrumentation requirements of the Army Smoke Research Program, 2

Haze in West Germany: a preliminary report on project "Meppen 80," measurements of the properties of wintertime fog and, 126
High altitudes, moisture sounding at millimeter wavelengths (94/183 GHz) at, 232

Impact of aerosol modeling on performance calculations of electro-optic systems operating in marine environments, 200
Infrared sensors, review of cirrus cloud optical properties and effects on, 70
Infrared transmission through snow, visible and, 93
Infrared and visible extinction, adverse weather, measurements of, 99
Instrumentation for millimeter wave turbulence measurements, 253
Instrumentation requirements of the Army Smoke Research Program, future optical and electro-optical, 2

Large fires, visible, infrared, and microwave propagation in and near, 28

Man-made obscurants on visual contrast, effects of atmospheric and, 37
Marine atmospheric boundary layer, meteorological modes for optical properties in the, 170
Marine boundary layer, aerosol modeling in the, 150
Marine and coastal boundary layer, aerosol composition in the, 154
Marine environment, modified gamma aerosol model for the, 186
Marine environments, impact of aerosol modeling on performance calculating of electro-optic systems operating in, 200
Mass extinction coefficient for phosphorus smokes, comparison of methods used to determine the, 7
Measurements of infrared and visible extinction in adverse weather, 99
Measurements of the phase function of natural particles, 106

Measurements of the properties of wintertime fog and haze in West Germany: a preliminary report on project "Meppen 80," 126
"Meppen 80," measurements of the properties of wintertime fog and haze in West Germany: a preliminary report on project, 126
Meteorological modes for optical properties in the marine atmospheric boundary layer, 170
Microstructure, the effect of the aerosol on fog, 162
Microwave propagation in and near large fires, visible, infrared, and, 28
Millimeter wave propagation measurements at the Ballistic Research Laboratory, 224
Millimeter wave region, model for resonant transmittance in the, 244
Millimeter wave turbulence measurements, instrumentation for, 253
Millimeter wavelengths (94/183 GHz) at high altitudes, moisture sounding at, 232
Model aerosols growing into fogs, optical properties of, 143
Model for the marine environment, modified gamma aerosol, 186
Model for resonant transmittance in the millimeter wave region, 244
Modeling and field testing in the smoked environment, analysis of current electro-optical, 17
Modeling in the marine boundary layer, aerosol, 150
Modeling on performance calculations of electro-optic systems operating in marine environments, impact of aerosol, 200
Modeling thermo-gradients and the dynamics of fire plumes, sequential process method of, 31
Models for cloudy atmospheres, contrast transmittance, 133
Models for optical properties in the marine atmospheric boundary layer, meteorological, 170
Modified gamma aerosol model for the marine environment, 186
Moisture sounding at millimeter wavelengths (94/183 GHz) at high altitudes, 232

Natural particles, measurements of the phase function of, 106
Near-millimeter-wave propagation in snow, characteristics of, 261
Near-millimeter-wave snow extinction: Atmospheric Sciences Laboratory-MMTRN model and data review, 238
Nonspherical particles at arbitrary wavelengths, extinction by aerosol clouds of, 24

Obscurants on visual contrast, effects of atmospheric and man-made, 37
Oceans, satellite measurements of aerosols over, 197
Operational techniques for estimating visible spectrum contrast transmittance, assessment of, 119
Optical characteristics of windblown dust, 45
Optical and electro-optical instrumentation requirements of the Army Smoke Research Program, future, 2
Optical modeling and field testing in the smoked environment, analysis of current electro-, 17
Optical properties and effects on infrared sensors, review of cirrus cloud, 70
Optical properties in the marine atmospheric boundary layer, meteorological models for, 170
Optical properties of model aerosols growing into fogs, 143
Optical sensor performance, weather and thermal electric-, 79
Optical turbulence measurements, preliminary shipboard, 212

Particles at arbitrary wavelengths, extinction by aerosol clouds of nonspherical, 24
Particles, measurements of the phase function of natural, 106
Performance calculations of electro-optic systems operating in marine environments, impact of aerosol modeling on, 200
Performance, weather and thermal electric-optical sensor, 79
Phase function of natural particles, measurements of the, 106
Phosphorus smokes, comparison of methods used to determine the mass extinction coefficient for, 7
Plumes, sequential process method of modeling thermo-gradients and the dynamics of fire, 31
Preliminary shipboard optical turbulence measurements, 212
Propagation in and near large fires, visible, infrared, and microwave, 28
Propagation measurements at the Ballistic Research Laboratory, millimeter wave, 224

Requirements of the Army Smoke Research Program, future optical and electro-optical instrumentation, 2
Resolution of electro-optical systems due to atmospheric effects, the change of limiting, 268
Resonant transmittance in the millimeter wave region, model for, 244
Review of cirrus cloud optical properties and effects on infrared sensors, 70

Satellite measurements of aerosols over oceans, 197
Sequential process method of modeling thermo-gradients and the dynamics of fire plumes, 31
Sensor performance, weather and thermal electric-optical, 79
Sensors, review of cirrus cloud optical properties and effects on infrared, 70
Shipboard optical turbulence measurements, preliminary, 212
Smoke Research Program, future optical and electro-optical instrumentation requirements of the Army, 2
Smoked environment, analysis of current electro-optical modeling and field testing in the, 17
Smokes, comparison of methods used to determine the mass extinction coefficient for phosphorus, 7
Snow, characteristics of near-millimeter-wave propagation in, 261
Snow extinction: Atmospheric Sciences Laboratory-MMTRN model and data review, near-millimeter-wave, 238
Snow, visible and infrared transmission through, 93
Sounding at millimeter wavelengths (94/183 GHz) at high altitudes, moisture, 232

Thermal electric-optical sensor performance, weather and, 79
Thermo-gradients and the dynamics of fire plumes, sequential process method of modeling, 31
Transmission effects of explosion-produced dust clouds on downward viewing airborne platforms, 53
Transmission through snow, visible and infrared, 93
Transmittance, assessment of operational techniques for estimating visible spectrum contrast, 119
Transmittance in the millimeter wave region, model for resonant, 244
Transmittance models for cloudy atmospheres, contrast, 133
Turbulence induced beam spread and wander at 10.6, 3.8, and 10.6 μm, experimental measurements of, 273
Turbulence measurements, instrumentation for millimeter wave, 253
Turbulence measurements, preliminary shipboard optical, 212

Visible extinction in adverse weather, measurements of infrared and, 99
Visible, infrared, and microwave propagation in and near large fires, 28
Visible and infrared transmission through snow, 93
Visible spectrum contrast transmittance, assessment of operational techniques for estimating, 119
Visual contrast, effects of atmospheric and man-made obscurants on, 37

Wander, at 1.06, 3.8, and 10.6 μm, experimental measurements of turbulence induced beam spread and, 273
Weather, measurements of infrared and visible extinction in adverse, 99
Weather and thermal electric-optical sensor performance, 79
West Germany: a preliminary report on project "Meppen 80," measurements of the properties of wintertime fog and haze in, 126
Windblown dust, optical characteristics of, 45
Wintertime fog and haze in West Germany: a preliminary report on project "Meppen 80," measurements of the properties of, 126
